

Primary school “St. St. Cyril and Methodius” Kameno Pole, Roman Municipality

Purpose

The main objective of the project is to provide a modern technological environment to create a common training model.

New technologies in school stimulate students and parents to actively engage in school life. It facilitates children's adaptation to the dynamic world in which we live and equal access to modern education.

Description

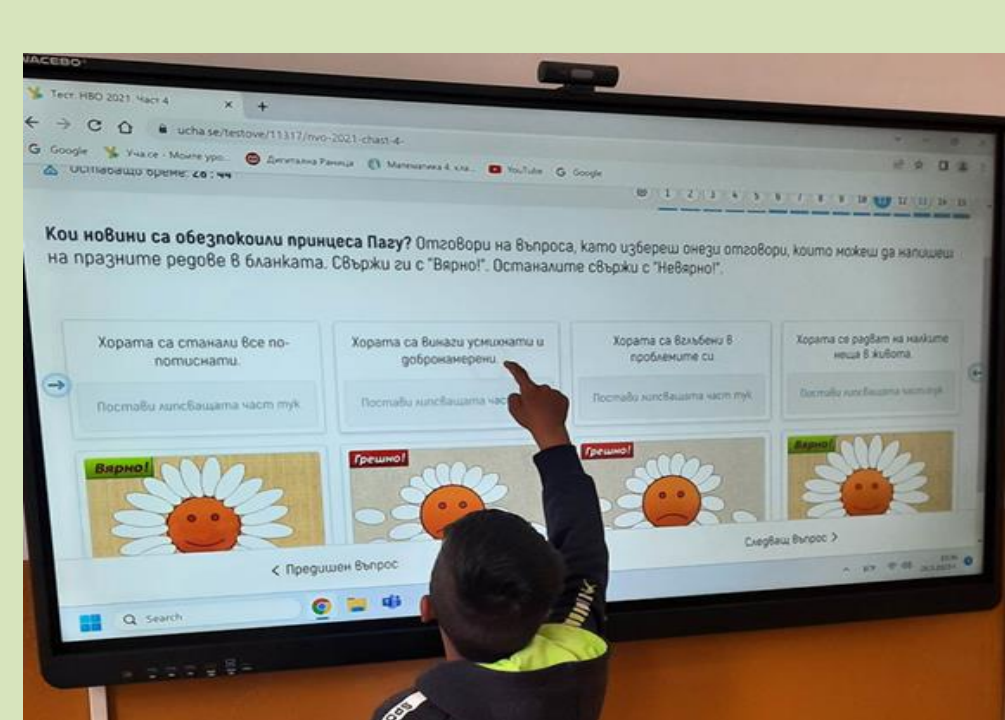

The project involves all students in the school through the use of new technologies in the school hours and beyond. The digital competence of 10 teachers and 33 students has increased. Training of teachers to work with interactive boards and mozaBook – educational software

For the implementation of the project activities have been purchased:

- interactive touch display – for every classroom and educational software MOZA Book;
- server for a computer cabinet;
- Wireless portable projector, which will be used to present the school to the local community on the occasion of various holidays, notable dates and events;
- notebooks to enhance students' digital competence;
- subscription to IT maintenance of the delivered equipment and training of three teachers.

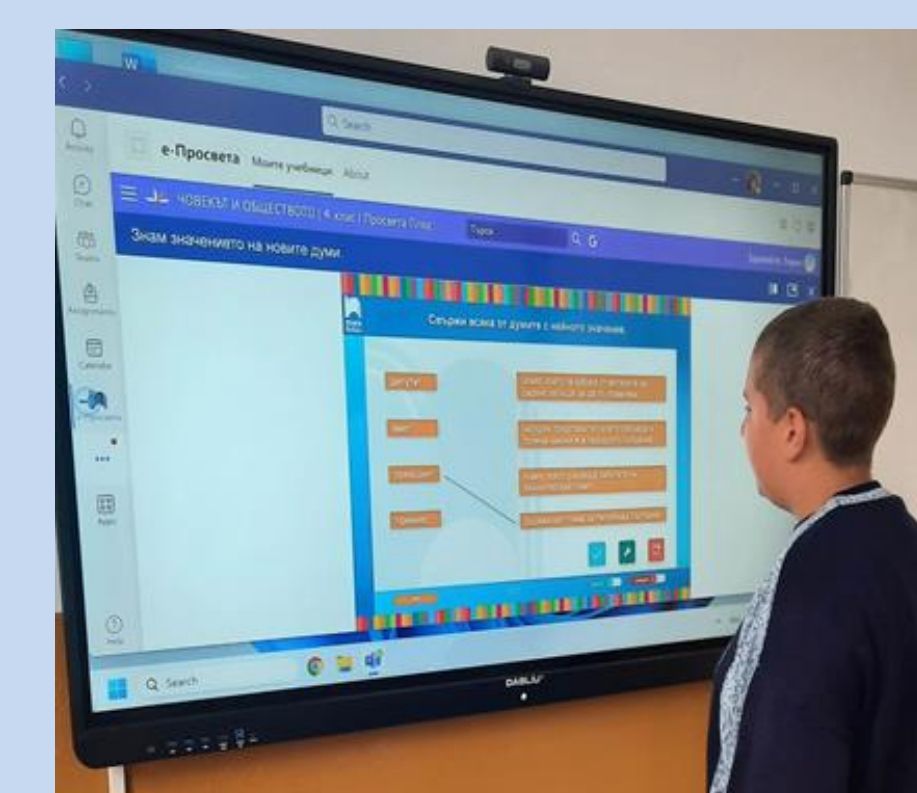

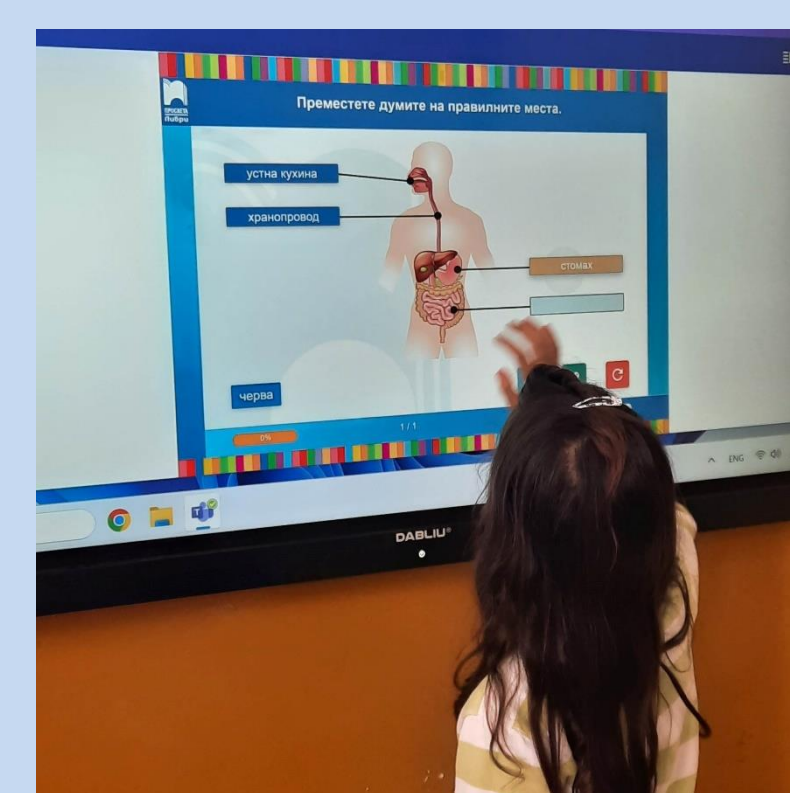

Expected results

Using new teaching and learning methods and techniques lead to increased concentration and attention in the educational process. It stimulates students' creative thinking. There is an increased motivation for learning and regular attendance of classes. Students are involved as active participants in the training. With increasing confidence and interest work on interactive displays. Teamwork and collaboration are encouraged.

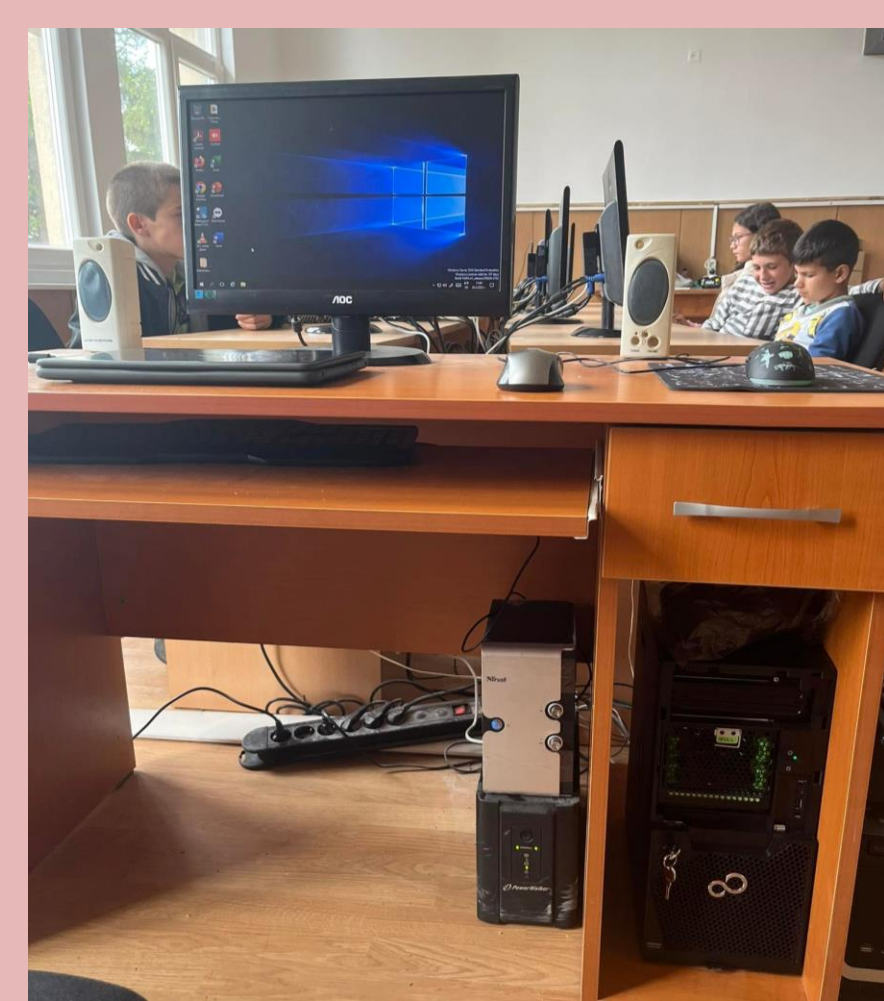

Results achieved

Pedagogical specialists conduct digital and interactive training with opportunities for quality learning process. There is access to educational software, educational websites, electronic textbooks. A new model of teaching has been built in the classroom. Cross-disciplinary links are created between different subjects.

Create

On the occasion of April 22 – Earth Day was held a binary lesson on Human and Nature and Geography and Economics. The main goal of the lesson is the environmental education of the students. Videos on the conservation and use of natural resources and their importance were presented. The students wrote promises on how they would protect nature and the earth, they made posters.

Share

The students participate in the holding of extracurricular events in connection with significant events and dates of Bulgarian history, days dedicated to the Christian family, tolerance, patience, etc. presented to parents and the local community. Included in quizzes dedicated to public holidays, notable personalities, historical events, etc.
